

TO HOANG MINH QUAN

FRONTEND DEVELOPER

 tohoangminhquan.dp@gmail.com  0971462609  thmq169  thmq169  Ho Chi Minh City

SUMMARY

I am a Frontend Developer with experience building enterprise web applications and ERP systems using Javascript, ReactJS, NextJS, TypeScript, and modern frontend technologies. Experienced in developing dynamic UI systems, reusable component libraries, and integrating RESTful APIs for complex business workflows. I focus on writing clean, maintainable code and delivering responsive, high-performance, and user-friendly interfaces.

EDUCATION

Ton Duc Thang University | Bachelor in Computer Science | GPA: 8.2/10 **2020 - 2024**

SKILLS

Technical skills

- Languages: JavaScript, TypeScript
- Frameworks/Platforms: ReactJS, NextJS, NodeJS, TailwindCSS
- Databases: MongoDB
- UI Libraries: Shadcn UI, Material UI, Ant Design, Bootstrap, Framer Motion, React Spring
- Others technical skills: HTML/HTML5/CSS, ES6, Context API, Redux, Zustand, I18Next, Responsive design, REST APIs, JSON, MERN, Git/Gitlabs, Postman, NPM, Socket, Capacitor, Tanstack Query, SEO

Soft skills:

- Good communication, collaborative teamwork, rapid learning, and proficient research abilities.
- Reading and comprehending documentation in English, understanding of technical specifications and requirements.

WORK EXPERIENCE

ATOM SOLUTION COMPANY - Frontend Developer **April, 2024 – Present**

ERP Platform (Small and Medium Enterprize + Education Management) **August, 2024 – Present**

- Technologies: ReactJS, React Redux, Zustand, React Router V6, Axios, I18Next, TailwindCSS, React Hook Form, Socket, Tanstack Query
- Responsibilities:
 - Designed and developed a configuration-driven UI architecture (menu, list view, form view, widget system) based on Odoo metadata, enabling scalable and extensible ERP workflows across multiple domains
 - Built a unified frontend platform supporting both Small and Medium Enterprize and Education systems, allowing reuse of core UI architecture while adapting to domain-specific business logic
 - Architected and maintained reusable component libraries and widget systems, improving development consistency and reducing duplication across modules
 - Implemented a dynamic data and form handling layer supporting complex validation, conditional rendering, and real-time interaction aligned with backend-driven logic
 - Developed dynamic search and filtering mechanisms capable of handling complex domain conditions and large datasets
 - Optimized frontend performance through efficient state management and data fetching strategies, improving rendering efficiency and overall user experience
 - Collaborated with cross-functional teams (PM, Backend, BA, QA, DevOps, Design) to ensure smooth delivery across development, staging, and production environments, including system demos and go-live support

- Team size: 3
- Technologies: NextJS, SASS, Framer Motion, SwiperJS
- Responsibilities:
 - Implement Multicurrency Section, Featuring Section, Partners Section, Secure Transactions Section, Network Section
- References:
 - Website: *landing-page-tram-connect*

E-Wallet Web3 Application**April, 2024 - June, 2024**

- Team size: 5
- Technologies: ReactJS, Typescript, TailwindCSS, Redux/ Redux Toolkit, React Spring
- Responsibilities:
 - Contributed to building frontend architecture for a Web3 wallet integrated within banking application
 - Implemented authentication and token transaction flows (buy, sell, transfer, receive)
 - Built unified balance view and transaction management system
 - Managed state synchronization and real-time updates for financial data

Voice To NFTs**April, 2024 - June, 2024**

- Team size: 2
- Technologies: NextJS, Typescript, TailwindCSS, React Speech Recognition, Framer Motion, ZKLogin, SUI, Aptos
- Responsibilities:
 - Implement login and connect wallet with SUI wallet, Aptos wallet, Google account
 - Developed speech recognition, text-to-speech, and communication with Backend APIs.
 - Implement NFT minting and fetch NFT list by interacting with smart contracts

PROJECTS**MERN - Kanban****July, 2023 - September, 2023**

- Position: Frontend + Backend
- Technologies: ReactJS, Material UI, React Redux, React Router V6, Axios, React Beautiful DnD, ExpressJS, MongoDB, Jsonwebtoken
- Responsibilities:
 - Designed and implemented a fullstack Kanban system based on a modular architecture
 - Architected scalable data models to support dynamic task management and efficient state transitions
 - Established secure authentication and a reliable data flow between client and server
 - Implemented an interactive drag-and-drop workflow while ensuring data consistency and state synchronization across the system

 - Github: github.com/thmq169/kanban | Website: kanban-thmq169.vercel.app

MERN - MovFlix**May, 2023 - July, 2023**

- Position: Frontend + Backend
- Technologies: ReactJS, Material UI, React Router V6, SwiperJS, Formik, Yup, Axios, ExpressJS, MongoDB, Jsonwebtoken
- Responsibilities:
 - Designed and developed Frontend & Backend, implemented authentication flow supporting user registration and login with session management
 - Built user-specific data layer for managing favorite movies, ensuring consistent state between UI and backend
 - Developed review system supporting create and delete operations with structured data handling
 - Implemented search system for movies, TV series, and people with dynamic query handling
 - Designed theming system (light/dark mode) with centralized state management for consistent UI experience
